The Application For The Pragmatic Homeowner

A combination of android application software and Arduino hardware are used to create a Home Management System for all your needs.

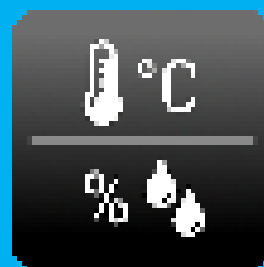

Air Quality

Sensors detect air quality to help create a safer and healthier environment.

Alarm

Sensors attached to doors and movement can be controlled directly making a more secure environment.

Temp Control

Check the temp of rooms and locations via the application as well as air humidity control.

Lock Control

Control the locks within your house to ensure maximum security and versatility.

Robust. Powerful. Essential
